Here we see the grip safety spring in the correct orientation. (The pin should be through the upper hole)

Side view mock-up showing the correct position for the grip safety “foot” between the bottom of the sear and the grip safety spring pin.
A view of the grip safety spring and “foot” being held in correct position. Install with spring leg down, then push it in to place with small punch or screw driver.

If at any time you release the grip safety, the spring and “foot” will fall or push out of position.
Grip safety “foot” sits between the sear and grip-safety pin

Hold grip safety in place during installation.
Continue to hold grip safety until rear assembly is completely set in the frame.
